### DETAILED ACTION

1. This application has been examined.
2. The following is an examiner's statement of reasons for allowance: The Terminal Disclaimer renders moot the double patenting rejection. The invention is a novel method and program product for scaling an image on a web browser operating on a standard television set so that the entire horizontal dimension of the scaled image is visible within the horizontal dimension of the television display device without scrolling. The horizontal dimension originally extends beyond the borders of the television display, and at the client web browser a scaling factor is determined by defining only the scaling amount necessary to fit the image within the horizontal dimension of that client television display. The image at the web browser is then scaled horizontally and vertically according to the determined scaling factor and displayed on the television display device, such that the entire horizontal dimension of the image is visible within the horizontal dimension of the television display device at the same time. Although Mighdoll et al (6311197) may come close in some features, nevertheless it does not have the full scaling and fitting features of the present invention. The features combined are not set forth in the prior art of record. Independent claim 1 recites the method as described, independent claim 10 recites the method specifying the web page, and independent claim 16 shows the program product corresponding to independent claim 1.
